

CONTENTS

PART I

FOR POLITICIANS AND EXECUTIVES, MANAGERS AND
OFFICIALS

A new strategy is needed to solve the 50-year-old problem - EMP protection of critical civilian infrastructure	1
1. Introduction	1
2. Opinions	4
3. The problems	8
4. Author strategy	9
5. Solutions for protective means from the author	11
6. Key findings	12
7. Epilogue	14
References to P. 1	15

PART II

FOR SCIENTISTS AND ENGINEERS

1. Technological progress or the Road to Hell?	16
1.1. Introduction	16
1.2. Smart Grid – one more dangerous vector of the “technological advantage” in the electrical power industry	17
1.2.1. Smart Grid – Russian style	17
1.2.2. Smart Grid – Western style	22
References to Ch. 1	48
2. EMP protection of critical civilian infrastructure: the problems	55
References to Ch. 2	87
3. EMP protection of critical civilian infrastructure: bad trends	89
3.1. Introduction	89
3.2. Cybernetic and electromagnetic impact on	

electronic equipment: do they have anything in common?	108
References to Ch. 3	115
4. Features of using traditional military-grade EMP simulators for testing civilian equipment	117
4.1. Introduction	117
4.2. Method and aims of HEMP-resilience test	118
4.3. Test-bench HEMP simulators	120
References to Ch. 4	139
5. Costly fakes and reality	141
References to Ch. 5	178
6. EMP protective means, designed by author (short catalogue)	182
Index	200
